

## Schedule for EarthScope Speaker Series

The 2009–10 EarthScope Speaker Series is presenting scientific results of EarthScope research to faculty and students in departmental seminars at colleges and universities ([www.earthscope.org/speakers](http://www.earthscope.org/speakers)).

EarthScope is a National Science Foundation program to explore the structure and evolution of the North American continent and understand the processes that cause earthquakes and volcanic eruptions ([www.earthscope.org](http://www.earthscope.org)). Speakers are selected based on their outstanding research accomplishments as well as their abilities to engage a variety of audiences. Each speaker presents science-based lectures on their own EarthScope-related project, and their talks include an introduction highlighting broader EarthScope objectives and accomplishments.
